The ironwork stays.

A vector master and compact companion built from the selected IO2. Not another concept round.

What changed

The selected interior contours are retained; the outer roof is straightened, the baseline leveled and the curves smoothed. The white A and I remain negative space within the fan.

Real, licensed typography

Bricolage Grotesque Bold (700) replaces the generated lettering. This is the font already specified for the event, not a claimed exact match to the generated type. SVG and PDF masters use outlined glyphs.

Use: SVG for web/design tools; transparent PNG when a raster is required; vector PDF for layout/print workflows. These are RGB files, not press-certified CMYK separations.

One identity. Two levels of detail.

Recommended minimums refer to displayed CSS width, not the resolution of a PNG file.

Master

Mark ≥160 px · lockup ≥320 px

Master: retains the triangular iron lattice and full detail. Use it at larger sizes, on white or light paper.

Compact

Mark ≥48 px · lockup ≥240 px

Compact: removes 32 small lattice openings and strengthens the ribs. It is for smaller use; do not replace the primary mark everywhere.

The small-size limit

At 16–32 px, the crown works as a silhouette—not as reliably readable AI. The supplied ICO contains 16, 32 and 48 px images on light paper. The 48 px minimum is a reproduction floor, not a guarantee of AI recognition. Pair the mark with the event name.

48 px source

A short usage checklist.

The kit contains SVG, PNG, RGB vector PDF, ICO, a font/editing source, the original concept and a manifest.

Keep these rules

Light backgrounds only. Use white or paper #F1EDF3. Dark treatments are not included.

Clear space. Leave at least one tall arch bay's width around the visible artwork. The files include only a small export margin.

No stretching or patching. Don't alter individual ribs, fill the negative spaces, rotate the crown, or crop the silhouette.

One-color output. Use the supplied black or brand-ink artwork; do not approximate it with a low-quality screenshot.

Files and editing

svg/ — transparent, outlined masters and compact versions.
png/ — transparent raster exports; favicon tiles have light backgrounds.
pdf/ — vector logo artboards, RGB.
fonts/ — Bricolage Bold and license notices.
sources/ — selected concept, geometry data and font-dependent live text.
manifest.json — provenance, limits and file hashes.

Editing type: install the bundled Bricolage font for the live-type source. Use outlined SVGs for final placement so recipients do not need the font.

Purple / #6A4C8C

Ink / #2A2035

Paper / #F1EDF3

Font licenses are included. No trademark clearance or exclusive generated-art rights are claimed. Printer-specific color conversion, material tests and a press proof remain separate. The original event website has not been changed.
